

```
render() {  
  return (  
    <React.Fragment>  
      <div className="py-5">  
        <div className="container">  
          <Title name="our" title="product">  
            <div className="row">  
              <ProductConsumer>  
                {(value) => {  
                  console.log(value)  
                }}  
              </ProductConsumer>  
            </div>  
          </div>  
        </div>  
      </React.Fragment>  
    )  
  )  
}
```

Dr. Lab Presentation

Presented By

Tabarak Ali

What is Dr. Lab ?

management software is a comprehensive and integrated solution specifically designed to meet the needs of medical laboratories and healthcare centers. The program aims to streamline laboratory management processes and enhance operational efficiency through a variety of tools and advanced features.

Project Overview

The software improves efficiency by automating tasks, enhancing accuracy, and reducing costs through less paperwork and fewer errors – all while ensuring high security and better patient satisfaction.

The system features seamless auto-updates, ensuring you always have the latest version without any interruptions.

It also offers powerful tools like detailed reporting, user access control, and customizable workflows to suit every lab's needs.

How It Works

- Electron handles the application shell and auto-updates.
- React builds the user interface.
- SQLite stores and retrieves data locally.
- IPC allows communication between the frontend and database logic.
- All data stays securely on the device, ensuring privacy and speed.

Technology Stack

- ElectronJS: For packaging and delivering the app as a desktop solution (Windows, macOS, Linux).
- ReactJS: For building a fast and dynamic frontend UI.

- SQLite: A lightweight local database to store patient, test, and visit data.
- IPC (Inter Process Communication): For backend-frontend communication within Electron.
